

QiTASC

the magic of E2E testing

QiTASC is your one stop shop for your testing projects. We provide you with an „End to End“ test automation framework, automated test cases, verification rules, project management and reporting features.

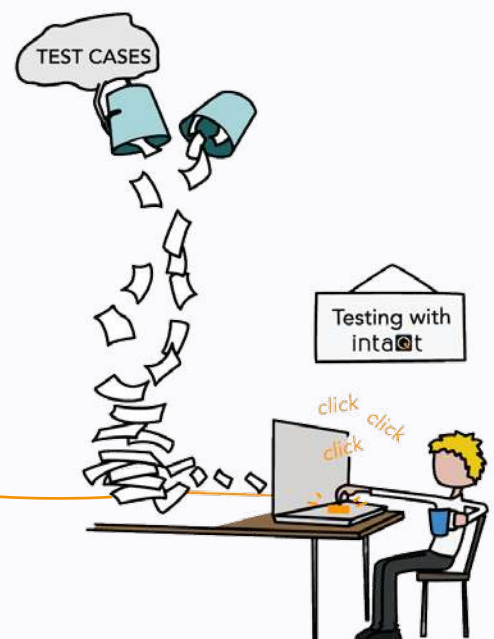

We have developed a series of product with our main product intaQt® to guarantee you a reliable business.

Manage Test Automation Projects

Create, manage and execute automated tests that reflect real-world scenarios, customer experiences and complex interactions with various domains.

intaQt® supports real and simulated devices, and provides configurations to ensure that resources, including phones, are managed efficiently and that test cases and their results reflect real-life scenarios.

QiTASC

Security. Quality. Time-efficiency.

Because life is too short for manual testing.

intaQt® provides built-in functionalities for communicating with backend systems. The following are just some of the many that you can incorporate our built-ins into your test cases.

Focus on Reusability

To gain the maximum benefits of intaQt® functionalities, we place a strong focus on the reusability of test cases.

Focus on Web-based User Interfaces

At QiTASC, we have developed a test language specifically suited for the automated testing of web-based user interfaces. It is characterized by its ease of understanding and flexibility.

Easy in use

intaQt® dynamically supports the introduction of new services, technologies and legal requirements. With the touch of a button, complex testing scenarios are run with an E2E framework.

intaQt® makes automated testing a smooth experience

Our tool saves you time and money while providing high quality.

We help you boost customer loyalty through trust and credibility.

Our complete package covers the entire development lifecycle.

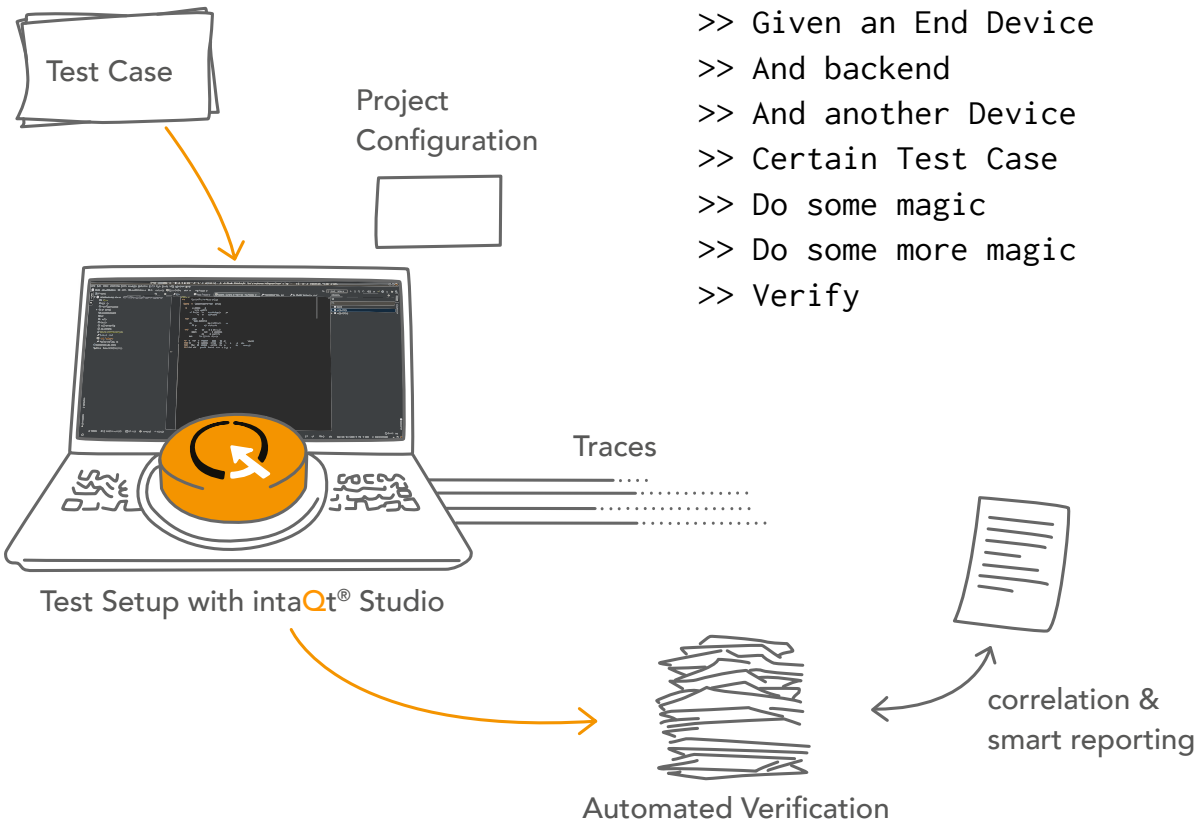

We support you throughout the whole development lifecycle.

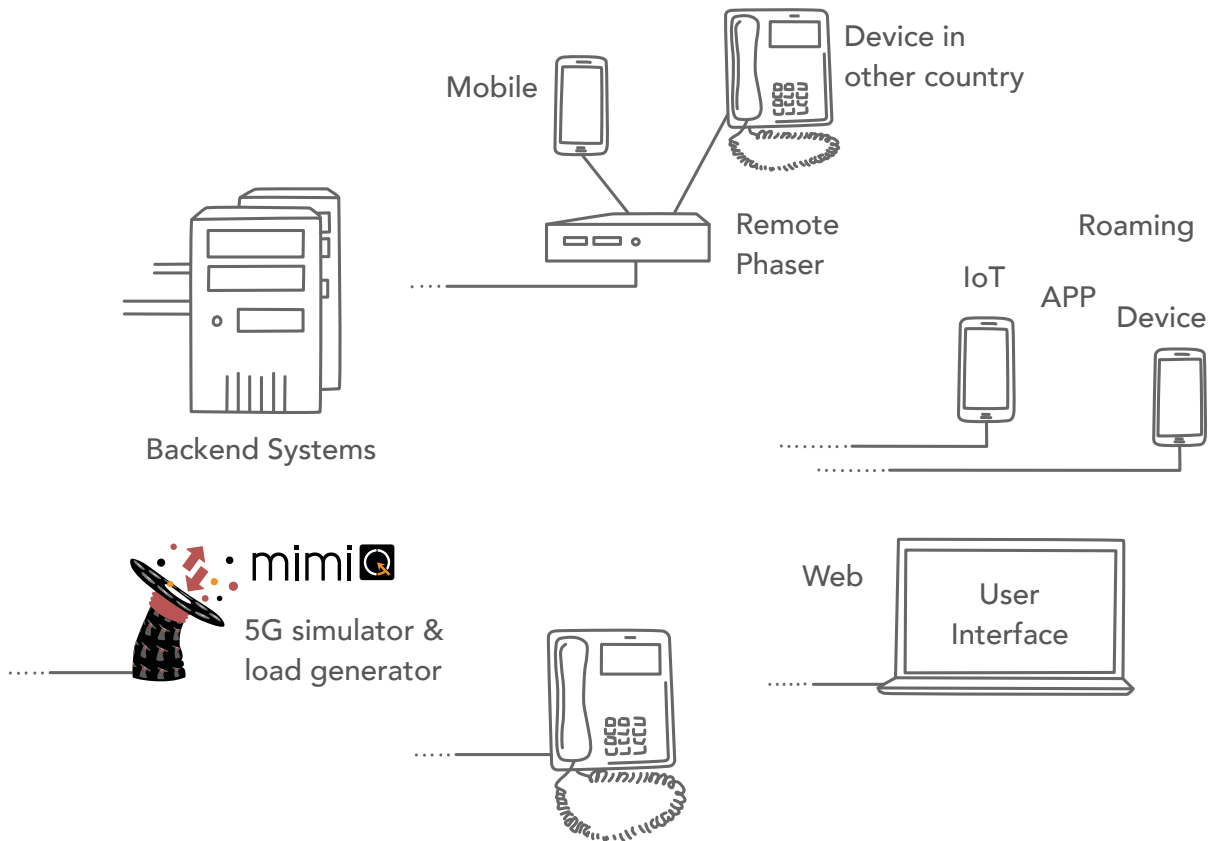

We assist you in predicting future workloads.

We provide clear and practical documentation throughout the process.

- >> Given an End Device
- >> And backend
- >> And another Device
- >> Certain Test Case
- >> Do some magic
- >> Do some more magic
- >> Verify

WHO we are?

We are QiTASC - **Quality Improving Tools And Services Company**. We believe in Test Driven Development & Continuous Integration. We have strong expertise in fully automated testing of complex scenarios that involve multi-platforms.

WHAT we DO?

QiTASC has developed intaQt® – an INtelligent Test Automation and Quality-assurance Tool. This End-to-End test automation solution with access to backend systems eases the integration and execution of complex, functional test cases, where different domains and technologies are united in a single test case.

Our products are for running parallel & numerous scenarios, for a rule based and very flexible validation capabilities, for a model based test case creation, as well as for analyzing the output data and smart reporting.

WHY you should choose us?

- intaQt® can reduce your current QA costs for up to 50%.
- intaQt® is designed to operate End to End and interact with the backend systems together with E2E terminal support (mobile device, mobile web, wap, app, web, IP phone, etc.)
- intaQt® SOLUTION SUITE provides E2E testing of any kind of services and applications (e.g. telecommunications, information technology, IoT, banking, retail, etc.)
- mimiQ is a more general-purpose “interface testing tool”. It is a test script executor with built-in support for any kind of http communication.
